SUMMARY

Data Analyst and Fullstack programmer with an Informatics Engineering background and experience managing digital channels (website, landing page, and digital media). Experienced in digital product performance analysis, processing leads, traffic, and campaign data to produce business insights that support decision-making. Accustomed to working with operational data, Excel-based reporting, backend/API integration, and understanding digital system integration to support business transformation.

WORK EXPERIENCE

PT Kalanara Group Indonesia - Fullstack Programmer (Contract)

Mar 2026 – Jul 2026

Mobile App Development (React Native Android & iOS)

- Developed and maintained multiple React Native mobile applications for Android and iOS platforms.
- Implemented and enhanced face recognition attendance features for employee check-in and check-out.
- Redesigned application UI based on updated UI/UX designs, improving user experience across three mobile applications.
- Integrated mobile applications with existing backend APIs and meticulously cross-checked implementations against the web application to identify incorrect or dummy API endpoints.
- Collaborated closely with backend developers to validate API endpoints, troubleshoot integration issues, and ensure feature consistency between web and mobile platforms.
- Built Android release packages using Gradle (assembleRelease / bundleRelease) for testing and production deployment.
- Managed iOS beta distribution through App Store Connect using TestFlight, and supported Android deployment through Google Play Console for internal and production testing.

Web Development & QA (Next.js / Three.js)

- Rebuilt a promotional website for a game using Next.js, integrating Three.js for interactive 3D visuals and Animate.js for scroll-based animations.
- Conducted rigorous QA using a combination of automated end-to-end testing (Playwright and Cypress) and detailed manual test case execution, covering functional flows, edge cases, and cross-browser consistency to ensure a stable, bug-free release.

AI Assisted Frontend Development (Claude AI)

- Started from an existing application architecture with a functional but basic UI/UX, and upon request to elevate the visual quality, conducted independent research into modern UI/animation component libraries such as Framer Motion, 21st.dev, Aceternity UI, Magic UI, Motion Primitives, and shadcn/ui to find suitable reference patterns.
- Sourced UI/animation component references from these design platforms, then used Claude (Anthropic AI assistant) to analyze the components and get guidance on the correct way to implement them within the existing project structure.
- Applied AI-assisted implementation guidance to integrate complex UI and animation patterns into an interactive web-based game, LoveCoupleGames (<https://lovecouplegames.com/>), while ensuring the implementation did not negatively affect performance metrics such as Largest Contentful Paint (LCP).
- Reduced trial-and-error time when adopting new component patterns by using AI-assisted research to quickly understand component structure and best-practice integration methods before implementation.

In-App Purchase Integration & QA (React Native Expo)

- Diagnosed and resolved in-app purchase (IAP) integration issues on a separate React Native Expo project, carefully configuring product entitlements and validating transaction flows across Android and iOS.
- Performed thorough QA and regression testing on IAP functionality using Playwright and Cypress-based automation paired with manual verification of edge-case purchase scenarios, ensuring reliable and error-free purchase flows before deployment.

PT Wae Mandiri Karya - Web Programmer (Contract, WFH)

May 2025 – Mar 2026

- Validated product and order data within the website system against internal records to catch inconsistencies before they affected downstream processes.
- Cross checked data across systems (website, product catalogs, and databases) on a regular basis to identify discrepancies or input errors, applying a testing oriented mindset to non code data flows.
- Documented technical and process changes in a structured, traceable format to support review and quality tracking over time.
- Coordinated remotely with internal teams (owner, production, and admin) to follow up on incomplete data and keep information updated in real time.
- Compiled structured work-progress reports using a consistent format to support monitoring and decision-making.

PT Kemas Kayu Indonesia - Web Mobile & App Developer & IT Support (Contract)

Mar 2025 – Mar 2026

- Developed company website and landing pages for PT Kemas Kayu Indonesia & PT Menara Bekasi Lestari, and built/maintained backend services and API integrations (Node.js, Express) connecting the website, POS system, and internal tools to a centralized database for reliable data flow.
- Implemented SEO strategy through keyword research and on-page optimization, built and managed social media channels from scratch (Instagram, Facebook, TikTok, YouTube, WhatsApp Business), executed paid ads campaigns resulting in confirmed export purchase orders (PO), and produced scripts and edited video content for digital marketing needs.
- Created 3D pallet modeling using SketchUp, allowing clients to directly visualize what the actual pallet design looks like in 3D; dimensions entered during the modeling process were used to automatically generate the corresponding Purchase Order (PO) file, streamlining the ordering process.
- Developed and maintained a POS (Point of Sale) application to support daily sales and order transactions.
- Provided IT support and infrastructure solutions, including Windows installation and OS troubleshooting, boot/startup issue resolution, printer setup and troubleshooting, and general hardware troubleshooting, alongside attendance system configuration and remote server setup via Tailscale.
- Maintained company websites and conducted business lead research using Hunter.io, Apollo.io, and LinkedIn.

CV Desainerimnco - Fullstack Developer (Contract)

Jun 2023 – Aug 2024

- Developed responsive and high-performance websites for multiple clients.
- Delivered company profile and business websites for PT Bangunciptanusakarya, FONAMS, and DIAMN.
- For FONAMS, developed a mobile application for rental booking/reservation, enabling customers to browse and book rentals directly, along with a promotional website built to Google SEO best-practice standards to ensure strong search visibility and quality.
- Contributed to end-to-end development using modern web technologies.

Spin The Radio FM - Web Developer (Contract)

Jan 2020 – Jan 2021

- Developed and launched the official radio station website; conducted deployment research covering security, performance, SEO, and backup; increased audience engagement by approximately 80% during the launch period.

Project-Based & Freelance Experience

2022 – 2024

- Built web applications using Next.js and Firebase, developed quiz systems with authentication and score tracking, created SEO-optimized and mobile-responsive websites, and built asset management systems with Midtrans payment integration.

EDUCATION

UNIVERSITAS ESA UNGGUL*Sep 2020 - Aug 2024*

- Bachelor Degree in Informatics Engineering, GPA 3.72/4.00.

SMA TAMAN HARAPAN 1*Jul 2017 - Jun 2020*

- Senior High School, Natural Science major.
- Staff of OSIS (2018 - 2019); 4th Winner of Poster Design Competition.
